Comfort menu overview

Available settings in this menu depend on the HVAC equipment connected to your Control4 system, but these are the possible settings.

Temperature
Control heating and cooling (default view)

Humidity
Sets humidity levels (if supported)

Schedule
Create and view schedules

Extras
Set C°/F° and specify sensor location

Mode

Choose from Heat, Cool, Auto, and Off.

Auto

Fan

Choose from On, Auto, and Circulate.

Auto

Presets

Select to display (and configure) your climate presets.

Comfort

Hold

Select to keep the current climate settings, regardless of presets or schedules.

Off

Using your thermostat

Whatever thermostat your home uses, Control4 gives you an easy-to-use interface for adjusting the climate. You can control temperature, humidity, and fan settings from your home or on the other side of the planet.

Control4 does more than just provide a pretty face to climate control—it lets you create a variety of set points (temperature ranges) and associate them with schedules or events in your home automation system. For example, you can begin cooling down your house 30 minutes before you come home from work, or it can start automatically whenever you enter the front door.

Changing the temperature

You can start out by using the climate control the same way you'd use a regular thermostat.

To change the temperature:

- 1 On a Navigator's home screen, select **Comfort**. The climate controls open.

- 2 Move the orange “heat” set point or the blue “cool” set point to the temperature you want.

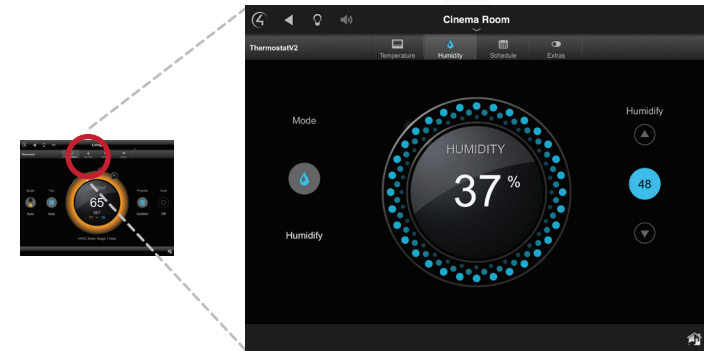

- OR -

Select the temperature in the center, and adjust set points in the screen that opens.

Changing the humidity

To change the humidity:

- 1 On a Navigator's home screen, select **Comfort**, then **Humidity**. The humidity controls open.

- 2 Select ▲ or ▼ to adjust the humidity level.
- 3 Select **Mode** to turn Humidify off or on.

Creating and using presets

Presets are a powerful and flexible way to save all of your climate settings, including heat and cool set points, fan mode, and humidity settings. With one touch, you can recall the right settings for any mood or activity, or you can schedule them. Presets make it easy for your home to respond to your life—you are no longer bound to a rigid, time-based schedule.

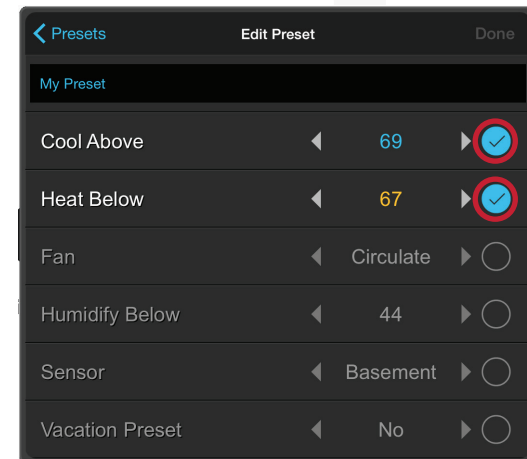

To create or edit a preset:

- 1 On a Navigator's home screen, select **Comfort**.
- 2 If your home has multiple thermostats, select the correct one.
- 3 Select **Presets**. The preset list appears, showing your currently available presets (if any).

- 4 To create a new preset, click the + or the pencil icon (depending on the type of Navigator) in the upper-right corner. Or, to edit an existing preset, select the preset name.

Here you can select what's contained in your new preset, such as the desired temperature for heating and cooling modes, the fan mode, humidity levels, and more.

- 5 To name (or rename) the preset, select the blue name field, use the on-screen keyboard to type a name, then select **Done**.
 - 6 To change values of the other fields, select ◀ or ▶.
-  **Note:** If **Auto Mode** is enabled on your thermostat, your thermostat will be changed to **Auto Mode** when this preset is selected.
- 7 After you've configured all settings for the preset, select **Done**.

To use a preset:

- 1 On a Navigator's home screen, select **Comfort** > **Presets** > [Preset Name]
- OR -
- Associate a preset with a schedule. See "Setting schedules" on page 5.

Setting schedules

A *schedule* is a range of times associated with a climate preset. Creating a schedule is simple after you've created your presets.

To create or edit a schedule:

- 1 On a Navigator's home screen, select **Comfort**, then select **Schedule**, then select the day of the week to set a schedule for. The daily schedules (if any have been already defined) appear.

- 2 To add a schedule, select the **+** or the pencil icon (depending on the type of Navigator) in the upper-right corner. Or, to edit an existing schedule, tap the schedule.
- 3 Select **▲** or **▼** to set the start time, then select **Next**. The preset list opens.
- 4 Select the preset you want to use at that time, then press **Done**. Repeat the process for all events for that day.

After creating schedules for a full day, you can copy the schedule to other days and thermostats.

To copy a day's schedule:

- 1 In the thermostat screen, select **Schedules** and the day to copy *from*.
- 2 Select  (copy).
- 3 Select each day you want to copy the schedule *to* (indicated by check marks).
- 4 If you have multiple thermostats, you can copy the schedule to those thermostats by selecting **Apply to all Thermostats**.

Note: The presets that the schedule uses must be configured on the other thermostats *before* the schedule is copied to them.

- 5 Select **Copy**.

Changing the temperature scale

To change the temperature scale:

- 1 On a Navigator's home screen, select **Comfort**. The climate controls open.
- 2 Select *Extras*.
- 3 Select the temperature scale (**Fahrenheit** or **Celsius**).

Clearing service reminders

Every three months, a message appears on the Comfort control screen to remind you to change your HVAC system's filters.

To dismiss the reminder:

- 1 From the thermostat screen, select **Extras**, then, on the *Reset HVAC Service Reminder* bar, select **Reset**. The message clears.

Control4 Wireless Thermostat by Aprilaire

The Control4 Wireless Thermostat by Aprilaire is a reliable, sophisticated device that consistently delivers the right level of comfort in the most efficient way possible. With advanced presets and scheduling, the thermostat works with you instead of forcing you to fit climate control into a rigid schedule.

- Enhanced compatibility with modern HVAC systems, including forced air, geothermal, dual fuel, and humidity control systems
- Control heating, cooling, ventilation, humidification, and dehumidification (with compatible HVAC systems)
- Easily adjust heat and cool set points, fan control, and humidity mode right at the thermostat
- Backlit LCD displays the temperature, operating mode, and status of HVAC, Indoor Air Quality control, fan, and hold
- Complementary design with Control4 lighting products
- Can easily be mounted in a utility closet with an optional remote temperature sensor

Learn more

If you have this thermostat installed, you can learn more about its operation in the user guide at ctrl4.co/tstat-user.

Controlling blinds and shades

Along with thermostats, window coverings can affect your home's comfort level. Use Control4 to manage your home's blinds and shades.

 **Tip:** Use blinds and shades to help regulate your home's temperature.

To control a room's blinds and shades:

- 1 Select the room, if necessary, from the room pull-down menu at the top center of the screen.

- 2 Select the **Shades** icon.

The room's blinds and shades controls open.

- 3 Select the blind and shade controls to open or close them. It's important to remember that depending on how your blinds are installed, closing the blinds could be done by either raising or lowering them.
